8. Risks & Mitigation

Identified Risks

- Potential performance slowdowns during peak HR operations (e.g., bulk employee data entry, approval and report generation).
- Delays in processing bulk notifications or approvals under high usage.

- HR workflow operations (e.g., promotions, transfers, or leave approvals) may experience latency with many concurrent users.

Mitigation Measures

- Enhance system resources and optimize database queries to ensure smooth handling of large employee datasets.
 - Enable continuous monitoring and alerting for critical HR operations to maintain system reliability.
-

9. Final Assessment

The Final Assessment of functional testing confirms that the HRMS functions as expected across all modules and workflows. All critical and major functionalities were tested successfully, including new employee entry, employee operations, approvals, increments, transfers, daily contracts, and reporting. The HRMS demonstrated reliable performance, maintained accurate employee data, and adhered to all compliance requirements. The system is deemed ready for production deployment, with all critical HR workflows validated and fully operational.
