Regression Testing Detailed Report

Project: HRMS

Document Type: Regression Testing Report

Prepared For: Client Delivery

Version: 1.0

Date: 2nd December, 2025

1. Introduction

This regression test ensures that all HRMS modules continue working correctly after recent updates or bug fixes. The test covers end-to-end employee features, including New Employee Entry, Search Employee, Employee Status, Draft Employee, Employee Operations, Death Registration, Increment Process, New Recruit, Approval workflows, HRMS Reports, and Daily Contract modules. The objective is to verify that all forms, data processing, workflows, and reports function without errors, and that no existing features break due to system changes. All critical operations will be revalidated to maintain overall system stability and performance.

3. Trigger for Regression Cycle

Regression testing was executed due to the following recent changes in the HRMS module:

- New features added under Employee Operations (Bulk Transfer, Automated Promotion Update, Enhanced Increment Process).
- Major updates in New Employee Entry forms (Basic Info, Contacts, Nominee, Academic, Experience).

- Workflow improvements in Employee Approval processes (In-charge, Employee, Nominee, Address, Family).
- Bug fixes in Search Employee, Employee Status, and Draft Employee modules.
- Performance optimization applied in HRMS Reports and Daily Contract sections.

7. Identified Defects During Regression

Critical Defects: 0

Major Defects: 1

- Incorrect data mapping in *Employee Status* summary view.

Minor Defects: 1

- *Alignment issue in New Employee Entry → Academic table.*

All issues have been fixed and verified.

8. Observations

- No functional disruptions detected across HRMS modules after recent updates.
- System stability remained consistent in all employee lifecycle operations.
- All critical workflows (Employee Entry, Approvals, Status Update, Increment Process) performed as expected.

Areas to Monitor:

- HRMS Report export formatting under large data volume.
 - Employee Search performance during high-load queries.
-

9. Recommendations

- Expand automation coverage for high-usage HRMS workflows (New Employee Entry, Employee Operations, Approvals).
 - Maintain a continuous regression cycle after each HRMS release to ensure stability.
 - Review UI consistency across all HRMS forms and employee profile sections after deployments.
 - Strengthen integration testing for HRMS Reports and Employee Status modules to prevent data inconsistencies.
-

10. Final Conclusion

The regression testing of the HRMS module was successfully completed, and all major functionalities were verified to be stable after recent updates. No critical defects were found, and the identified issues were minor and promptly resolved. Core employee lifecycle processes—such as New Employee Entry, Search Employee, Employee Operations, Approvals, and Reporting—performed consistently across all test scenarios. Overall, the system remains reliable, functionally sound, and ready for production use, with only a few areas identified for ongoing performance monitoring and future enhancement.
